

ABSTRACT

A system for delivering pre and post operative support and care to patients undertaking elective medical procedures and processing information regarding the patient and sales of products and services made to such patient, comprising means for receiving, processing and delivering personal, medical and credit information pertaining to patients, to and from patients and medical practitioners, means for providing information regarding what can be expected through the process of undergoing a medical procedure and for providing positive reinforcement to patients regarding their decision to undergo a medical procedure, means for scheduling and coordinating pre and post-operative medical appointments and procedures between patients and medical practitioners, means for receiving, processing and delivering pre and post procedure care orders and medicament prescriptions from medical practitioners to patients and means for monitoring patient adherence to medical practitioners' care orders and medicament prescriptions. The system optionally further comprises means for electronically transmitting said patient credit data to a third party lender for medical procedure financing application processing or alternatively, means for transmitting and receiving insurer or third party payor authorization for payment of medical consultations and procedures, means for processing medical practitioners' receipt of payment for said medical consultations and procedures through said third party lender upon patient credit and financing approval or from insurers or third party payors, and means for processing data regarding sales of medicaments and completion of medical procedure financing transactions attributable to each medical practitioner, and calculation of payments due to each medical practitioner based on said sales and financings.
